ABSTRAC

Glass melting furnace, of the type consisting of a melting chamber, inside which is found the liquid glass mass, with an outlet, and at least one flue gas recuperative chamber, a means for supplying the influx of fuel, featuring at least one mass temperature gauge immersed in the liquid glass mass and placed approximately at a height (h₂) with respect to the bottom of the melting chamber of 1/3 to 1/5 of the height (h) of the level of the liquid glass mass, and 1/5 h \leq h₂ \leq 1/3 h on the longitudinal axis of the melting chamber at a distance (1₁) with respect to the wall of the chamber opposite the outlet, of between 0.6 and 0.85% of the length of the melting chamber 0.61 \leq 1₁ \leq 0.85 1.

For application in the manufacture of glass containers.
